First, you have to download the standard version of the Deep Freeze plug-in from the official website. Remember to check the license of this software. 2. Unzip the downloaded file and paste the downloaded files into your plug-ins directory. 3. Restart your computer. 4. You can now view the Deep Freeze interface in the System Preferences window. How to use this document Deep Freeze is compatible with the Mac OS X 10.9 and

above versions. Below is the Deep Freeze tutorial to explain the best practice to use the Deep Freeze plug-in. Install the Deep Freeze plug-in from the official website. Now, check the version number and date of the plug-in. If the version number is not at least 2.1.0 or newer, update the plug-in to the latest version. Click the "Install" button to install the plug-in. Check the license of this software. Note that the license agreement needs to be accepted in order to use Deep Freeze. This license agreement cannot be accepted without agreeing to the terms. If you do not want to accept the terms, click the "Cancel" button to cancel the installation process. Click the "Quit" button to quit the Deep Freeze interface. Restart your computer. Now, the next time you install a new version of a software, the previous version of the software will be automatically replaced by the new version of the software. Please share the knowledge with your friends. Useful resources Want to learn more about Deep Freeze? Use the below resources to learn more about this application. Apple Support Article Remember to check the license of this software. License Agreement: Deep Freeze In this license agreement, I agree to the following terms: 1. License. I am legally authorized to use Deep Freeze and the Deep 82157476af
